

SYSTEM DESIGN & BUILD

Our System Design & Build group integrates the products from our supplier partners into custom systems designed for specific customer applications. We design and build each system according to our customer's exact requirements and specifications.

Benefits

- Custom built to exact specifications
- Our systems are built to interface to the customers requirements, PID, PLC, Ethernet
- Heat tunnel applications are designed and purpose built from stainless steel for each application.
- We fully evaluate each system we build to meet the specified performance criteria in our test facilities
- Our cost effective design-build approach provides excellent ROI
- We design our systems with real, measurable process improvement as our goal

Why Buy From Us

Our line of custom-built hot air systems is only available from STANMECH. Our specialized knowledge of each our products ensures the right tool for each application.
